

Glenn Mauney, Wind Energy Consulting and Contracting's Director of Business Development, participated as a member of the Developer's panel at the 2nd *Annual Mid-Atlantic/Southeast Regional Wind Energy Institute Meeting*. The meeting's host, The Regional Wind Energy Institute, is focused on providing education to state wind working groups in Maryland, Virginia, North Carolina, Pennsylvania, Tennessee, South Carolina and Georgia.

As the only wind consultant on the panel, Mauney was able to provide expert information regarding community wind and the feasibility of small to midsize wind projects. The session also gave him an opportunity to present WECC's capabilities, including its developing educational initiative, to an audience of municipal leaders, federal representatives and state representatives from the Mid-Atlantic region.

Mauney, having attended both of these conferences, said that this year's meeting showed greater numbers of attendees, and higher level participation than the inaugural meeting last year. "It is proving to be a valuable educational experience for all those interested in the development of wind energy," Mauney said.

WECC is a leading full service renewable energy company. Founded in 2006, WECC's world class team provides a broad range of professional expertise and exceptional leadership and management acumen. WECC is the 'go to' turn-key solution for wind energy projects large and small worldwide.
